1. For missouri.tract dataframe, print the first 30 rows of data.

        Note: when rgeos is not available, polygon geometry
                                                                 computations in maptools depend on gpcl

2. Find the datatype of all the columns and comment about the N/A values in each column.

```
# Show the column types
data("missouri.tract")
